Mount Series

Magnetic Quick Mount Design

The magnetic + ball-bearing dual-lock design meets riders' needs for secure phone retention and quick attachment. The Quick-Launch mount allows effortless, alignment-free installation with its magnetic design, enabling blind mounting for ultimate convenience.

Built-in Vibration Dampener

The built-in shock-absorbing design reduces the mount's size while protecting your phone's lens from high-frequency vibrations, whether on smooth highways or rugged mountain roads.

Safety Lock

While the magnetic quick mount design securely holds your phone, Outplorer adds a safety lock for extra protection, ensuring your phone stays secure even on the bumpiest rides.

Adjustable Phone Angle

Quick launch mount is designed with a ball head angle adjustment device that allows for angle adjustment within a 24 degree range, making the phone screen easier to read.

FlexArm

Most of our mounts come with articulating arms that provide a variety of mounting options in portrait or landscape orientation, centering your phone as well as bypassing brake lines, mirrors, and various other devices to give you perfect placement of your phone on every ride.

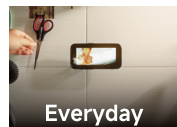

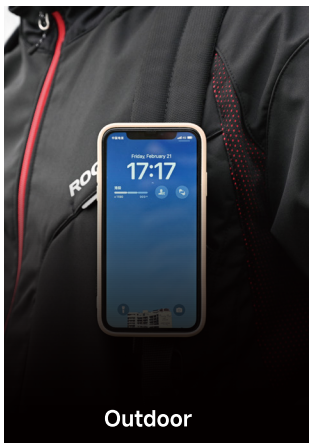

Wide Range of Adaptability

We have designed four tube clamp spacers to fit most bicycle and motorcycle handlebars on the market, with tube diameters ranging from 22mm to 35mm. It supports handlebars up to 31.8 mm. It can even be installed on 35mm handlebars without a spacer.

Outplorer Quick-Mount Mobile Ecosystem

The Outplorer Quick-Mount is more than just a mount, it's a complete mobile ecosystem
