Motorcycle Marking and affinity insurance

An easy way to affirm the company's
environmental commitment:
This catalogue is printed on **SUPPORT**
100% PEFC (paper from sustainably
managed forests bleached without chlorine),
with vegetable inks and by a
Imprim'Vert label printing company
located within one radius
of 50 km.

AUVRAY

The company Auvray was created in 1982 by Joseph Auvray, ironworker by trade. At the request of motorcycle brands and dealers, he created a range of high-security locks capable of stowing under the saddle of the models of the time. The U Force 10 was born. From then on, the company developed a complete range of motorcycle locks and an ARGOS approved motorcycle identification solution. Chains, U, disc blockers... etc with always the same philosophy of offering the best products with a high level of security at the best price. Auvray was bought by Gilles Gerin in 2006. Solidly established in the motorcycle and bicycle market, it continues the commercial development, motorcycle and bicycle anti-theft ranges and services.

2014 will be the year when Auvray will file the patent for its Speedmarking engraving gun ensuring the marking of motorcycles with factory quality, significant time savings and traceability of data. This year, Auvray bicycle locks entered the market.

Then in 2018, Auvray bought the company ICA, specialized in motorcycle identification allowing it to consolidate its development while completing its portfolio with affinity insurance services.

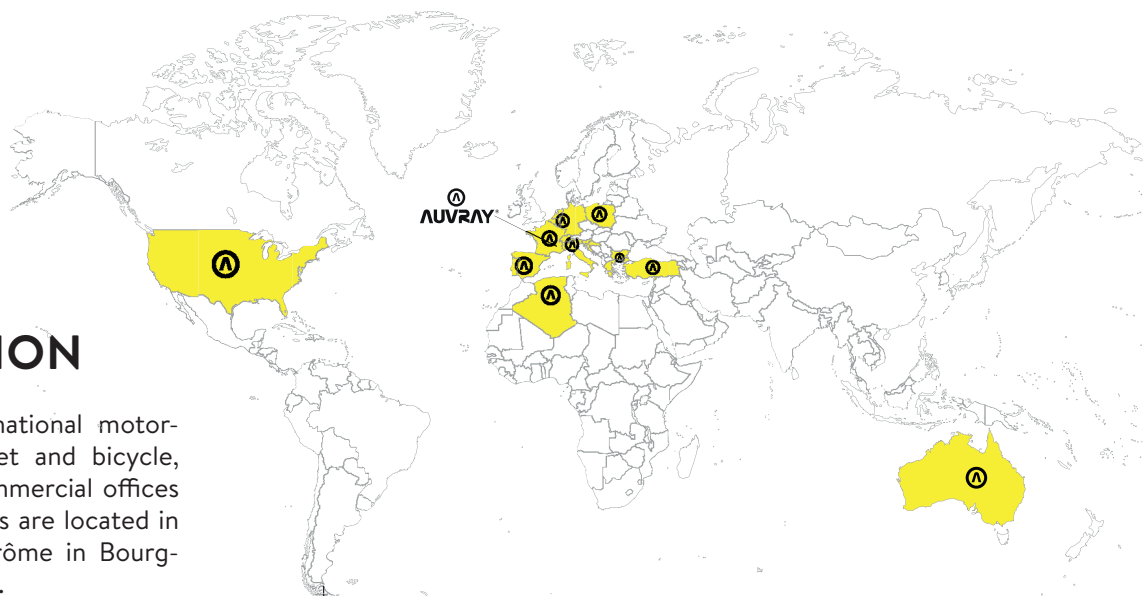

In 2020, Auvray became a bicycle identification operator approved by the French Ministry of Transport.

FMA insurance broker wholesale insurance since 1996, specialist in two-wheel insurance and partner of major brands: BMW Motorrad France, Honda France, Harley Davidson acquires Auvray in 2021 to offer two-wheeler professionals a comprehensive solution.

**HIGH QUALITY ANTI-THEFT CERTIFIED

TECHNOLOGIES

ICONS

FEATURES

ADVANTAGES

REVERSIBLE SHACKLE

The symmetrical system allows the shackle to be inserted into the body in both directions.

PROTECTIVE SLEEVE

The sleeve protects the bike, for example its rim, from rubbing against the anti-theft device, and therefore from scratches.

CASE-HARDENED STEEL

Case-hardened steel is heat-treated to harden the surface. This enables it to retain its core elasticity as well as resist surface stresses such as abrasion.

HARDENED STEEL

Hardened steel has been heat treated that gives it a very rigid structure and high hardness. Its carbon alloy gives it mechanical properties superior to those of conventional steels. As a result, it is highly resistant to various forms of aggression, such as torsion, bending, crushing, impact, abrasion, etc.

PASSIVATED STEEL

Passivated steel has undergone chemical surface treatment to prevent oxidation.

STAINLESS STEEL

Stainless steel is a high-alloy steel. It contains chromium, which protects it from oxidation. Its chemical composition makes it highly resistant to various aggressive elements.

DOUBLE LOCKING MECHANISM

The double locking mechanism enables the removable part of the lock to be locked into the fixed part at two points. This maximizes the force and time required to attack it.

SELF-LOCKING MECHANISM

The self-locking mechanism allows the lock to be closed in just a movement, without turning the key.

DISC CYLINDER LOCKS

Disc cylinder locks are the most reliable type of lock. Their design, with no springs or gimmicks, allows operation in all conditions and orientations. The number of discs means a multiplicity of combinations, while the design of the discs makes picking more complex than with conventional pin locks.

ANTI-SAWING

By design, materials used and the cross-sections selected, «anti-sawing» products are more resistant to sawing than the requirements of specialized technical classifications.

ANTIGIRATORY DEVICE OF THE SHACKLE IN CASE OF SAWING

In addition to the locking system, the device firmly blocks the shackle. This means it cannot be opened if the shackle is cut. The vehicle is always protected.

DUST COVER

The dust cover protects the inside of the lock from the insertion of foreign bodies that could interfere with key insertion. This protects the lock and maximizes product life.

ALARM 120 DB

Alarms emitting 120 dB are the loudest alarms authorized on the French market. The noise is a deterrent, while respecting the legal noise limits.

WATERPROOFNESS

The sealing of our electronic devices protects them from moisture and ensures their operation in rainy conditions.

LITHIUM BATTERY

This type of battery offers sufficient voltage for the needs of powerful devices such as alarms, long life and resistance to extreme temperatures.

DEDICATED TRANSPORT BRACKET

For these devices, there is a dedicated transport bracket.

SUITABLE TRANSPORT BRACKET

The suitable transport bracket is supplied with the device.

COLD RESISTANCE

The cold-resistant locks have been tested and work even in freezing conditions.

CERTIFICATIONS & GUARANTEES

SRA

CLASSE
S.R.A.

The SRA technical center or Safety and Automotive Repair has been set up by a group of insurers and applies to vehicles, their spare parts and their main accessories including anti-theft protection (U-lock, disc lock, chains, electric locks, ...)

Its classification is therefore a guarantee of quality as well as high resistance of the safety device to any attempt of theft (picking, sawing, bolt cutter, drilling). So when an anti-theft device is SRA approved, it means that you have equipment that can guarantee you protection recognized by insurers.

The SRA approval of an anti-theft device therefore ensures compliance with safety standards. That's why you'll see approved locks that are almost unbreakable.

The classification is valid for 3 years by agreement signed with the SRA. AUVRAY is recognized capable of manufacturing this type of anti-theft device with the necessary level of security for a minimum period of 3 years. This does not guarantee the duration of maintaining the level of safety of each device.

ARGOS

Created at the initiative of all insurance companies, the ARGOS file (Group of insurers for the identification, search and recovery of stolen vehicles) allows the identification of the 2 stolen wheels and facilitates their search and repatriation by law enforcement.

With investigators present throughout Europe, ARGOS relies on a database of 20 million vehicles, searchable in real time and directly accessible to all police and gendarmerie services. The engraving gives rise to the inscription of your 2 wheels in this file, for a period of 6 years.

Thus, ARGOS makes it possible to trace marked two-wheelers and their spare parts thanks to unique identification numbers and to detect, identify and recover stolen vehicles more efficiently.

ART

The ART organization comes from the Netherlands. Where it's crawling with bikes. Bringing together consumer representatives (ANWB), bicycle manufacturers (RAI) and insurers specializing in two-wheelers, the ART Foundation has developed a quality label. Following tests carried out by an independent body, the approved bicycle lock is classified according to its level of safety. Thus, it is with a star system that the preventive value of the anti-theft is identified. The more stars an anti-theft device has, the higher its preventive value and the more it protects against theft. A five-star anti-theft device has the highest preventive value. However, for bicycles, a 2-star approved bicycle lock is considered sufficiently secure for Dutch insurers.

FIND'R

TRACKER SYSTEM

Find'R - Connected Protection by Auvray

Compact and discreet, the **Find'R GPS tracker** ensures **active, 24/7 surveillance** of your motorcycle. In the event of a suspicious vibration or movement, it **instantly alerts** the owner via notification or call.

The dedicated app allows you to **track journeys**, save up to **five safety zones**, and access **24/7 assistance** in case of theft.

8 Thanks to **A'where** technology, Find'R communicates with certain Auvray anti-theft devices to offer **comprehensive, connected, and evolving protection**.

PROFESSIONAL ADVANTAGES

Quick Installation: Simplified mounting, compatible with most motorcycles and scooters.

Proven Reliability: Quality components, optimized connectivity.

Auvray Professional Line: French after-sales service & dedicated technical support.

Connected Ecosystem: Future integration with Auvray anti-theft devices and services.

INSURANCE PARTNERSHIP
offering a reduction in insurance premium and deductible

HOW TO USE

- > For maximum security, attach your 2-wheel to a fixed post using a **AUVRAY** U Lock or a heavy duty chain and anchor, in a well-lighted place at night.
- > When riding, do not carry the lock with you even in a backpack. Use the **AUVRAY** bracket or transport kit best suited to your bicycle, motorcycle or scooter.
- > Regularly oil the cylinder, shackle ends and lock body moving parts using the **AUVRAY** lube spray DN09A.
- > Always keep a spare key at home together with the copy code.

GUARANTY

- > The guaranty covers mechanical and electronic **AUVRAY** locks.
- > **AUVRAY** locks are guaranteed against failure due to material defects or workmanship, except cosmetic damages, neglect, lack of service and misuse, against proof of purchase and return of defective product at customer expenses. The guaranty does not cover the return freight expenses, loss of key, loss or theft or other related costs. Against a Return Merchandise Authorization, only the products proven to be defective by **AUVRAY** technical department will be replaced or repaired, then sent back to the approved **AUVRAY** reseller where the product was bought. Batteries and consumables are not guaranteed.
- > **AUVRAY** locks are guaranteed 2 years, extended to 10 years for S.R.A. certified **AUVRAY** lock-up systems.
- > Applies worldwide

SPEED MARKING
AUVRAY®
HIGH SECURITY

BB-518-EZ

00280018

3, 2, 1... Score !

SPEED MARKING is the essential tool for marking 2 wheels. In a few seconds it puts professional marking to the reach of your entire team. And what's more, it's simple!

THE BEST 2 WHEEL MARKING, QUITE SIMPLY!

ANTI-THEFT MARKING WITH GUARANTEED TRACEABILITY

Wireless embedded electronics

Grip padded touch face designed for ABS, steel or alu

High quality marking on any flat or curved surfaces

Dot peen Ø 4 mm carbide pin

Ultra compact design 2,6 kg

Power and balance

Lithium battery Autonomy 400 markings

Patent FR3029443

Android rugged terminal
Drop-proof

HANDHELD DOT PEEN MARKING MACHINE SMK007

1

THE OPERATOR SCANS THE CODE BEFORE MARKING.

So no possibility of error: the device starts only after this formality and once the code of marking is recorded.

2

IN LESS THAN 1 MINUTE THE 2-WHEELER IS MARKED.

Thanks to its power and handling, SPEED MARKING secures a motorcycle in less than 3 minutes and a bike in 1 minute with an industrial result of OEM quality.

3

WE ONLY PAY WHAT WE USE!

With SPEED MARKING: no subscription, no engraving files to pay in advance: you receive an invoice that corresponds only the markings made each month in your store.

Reinforced transport case foam lined, set contains :

- 1 handheld dot peen marking machine SMK007
- 2 lithium batteries 18VDC
- 1 battery charger
- 1 drop-proof Android rugged terminal with charger and preset **Auvray Speed Marking®** APP for motorized 2-wheeler and bicycle marking, VIN and repair modes
- connection wire

TRANSPORT CASE

We increase your purchasing power
with additional compensation
In case of theft of your vehicle,
we refund you up to 1000 €
if you buy your new two-wheeler in your dealership

Auvray Speed Marking Engraving Insurance

Auvray Advantage offer

The supplementary insurance to the engraving Auvray Speed Marking concerns customers who have their scooter or motorcycle engraved in an approved Auvray engraving centre (dealer).

In case of total theft of the 2-wheel engraved in an approved Auvray Speed Marking center, Auvray Advantage guarantees are as follows:

Customer

(owner of 2 wheels engraved in an approved Auvray centre)

MOTO/SCOOTER

	Auvray Advantage ⁽¹⁾	Advantage PREMIUM ⁽¹⁾
If vehicle insured	Up to 600 €	Up to 600 €
If vehicle not insured	Allowance 450 €	Allowance 450 €
OR buying a vehicle in dealership		Allowance 1000 € ⁽²⁾
Reimbursement of engraving costs	Up to 150 €	up to 150 €

AUVRAY

The company Auvray was created in 1982 by Joseph Auvray, ironworker by trade. At the request of motorcycle brands and dealers, he created a range of high-security locks capable of stowing under the saddle of the models of the time. The U Force 10 was born. From then on, the company developed a complete range of motorcycle locks and an ARGOS approved motorcycle identification solution. Chains, U, disc blockers... etc with always the same philosophy of offering the best products with a high level of security at the best price. Auvray was bought by Gilles Gerin in 2006. Solidly established in the motorcycle and bicycle market, it continues the commercial development, motorcycle and bicycle anti-theft ranges and services.

2014 will be the year when Auvray will file the patent for its Speedmarking engraving gun ensuring the marking of motorcycles with factory quality, significant time savings and traceability of data. This year, Auvray bicycle locks entered the market.

Then in 2018, Auvray bought the company ICA, specialized in motorcycle identification allowing it to consolidate its development while completing its portfolio with affinity insurance services.

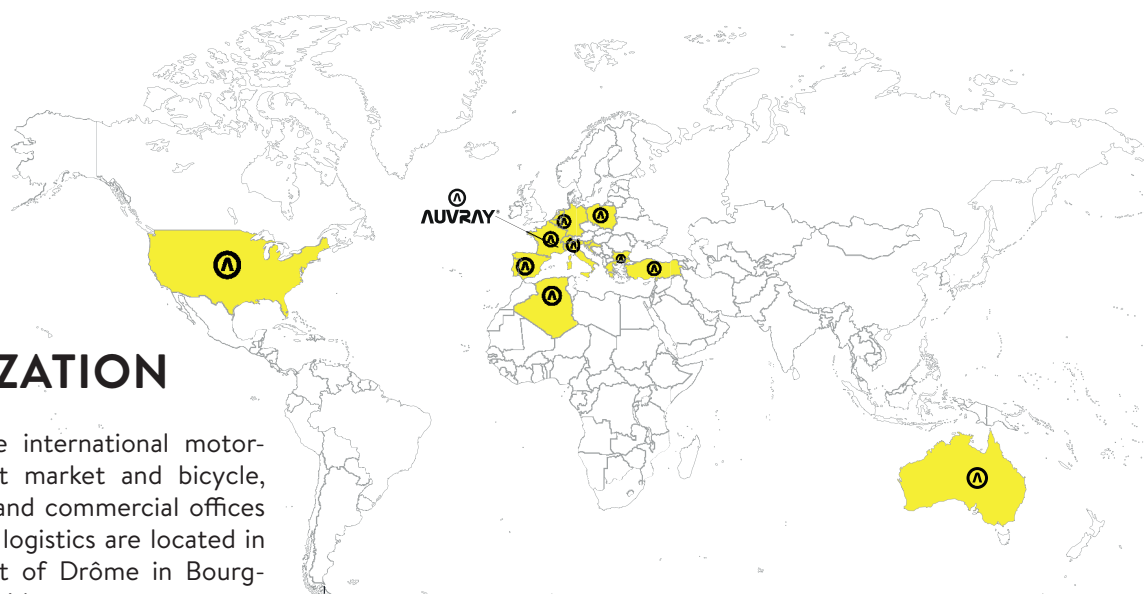

In 2020, Auvray became a bicycle identification operator approved by the French Ministry of Transport.

FMA insurance broker wholesale insurance since 1996, specialist in two-wheel insurance and partner of major brands: BMW Motorrad France, Honda France, Harley Davidson acquires Auvray in 2021 to offer two-wheeler professionals a comprehensive solution.

TECHNOLOGIES

ICONS

FEATURES

ADVANTAGES

REVERSIBLE SHACKLE

The symmetrical system allows the shackle to be inserted into the body in both directions.

PROTECTIVE SLEEVE

The sleeve protects the bike, for example its rim, from rubbing against the anti-theft device, and therefore from scratches.

CASE-HARDENED STEEL

Case-hardened steel is heat-treated to harden the surface. This enables it to retain its core elasticity as well as resist surface stresses such as abrasion.

HARDENED STEEL

Hardened steel has been heat treated that gives it a very rigid structure and high hardness. Its carbon alloy gives it mechanical properties superior to those of conventional steels. As a result, it is highly resistant to various forms of aggression, such as torsion, bending, crushing, impact, abrasion, etc.

PASSIVATED STEEL

Passivated steel has undergone chemical surface treatment to prevent oxidation.

STAINLESS STEEL

Stainless steel is a high-alloy steel. It contains chromium, which protects it from oxidation. Its chemical composition makes it highly resistant to various aggressive elements.

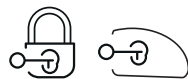

DOUBLE LOCKING MECHANISM

The double locking mechanism enables the removable part of the lock to be locked into the fixed part at two points. This maximizes the force and time required to attack it.

SELF-LOCKING MECHANISM

The self-locking mechanism allows the lock to be closed in just a movement, without turning the key.

DISC CYLINDER LOCKS

Disc cylinder locks are the most reliable type of lock. Their design, with no springs or gimmicks, allows operation in all conditions and orientations. The number of discs means a multiplicity of combinations, while the design of the discs makes picking more complex than with conventional pin locks.

ANTI-SAWING

By design, materials used and the cross-sections selected, «anti-sawing» products are more resistant to sawing than the requirements of specialized technical classifications.

ANTIGIRATORY DEVICE OF THE SHACKLE IN CASE OF SAWING

In addition to the locking system, the device firmly blocks the shackle. This means it cannot be opened if the shackle is cut. The vehicle is always protected.

DUST COVER

The dust cover protects the inside of the lock from the insertion of foreign bodies that could interfere with key insertion. This protects the lock and maximizes product life.

ALARM 120 DB

Alarms emitting 120 dB are the loudest alarms authorized on the French market. The noise is a deterrent, while respecting the legal noise limits.

WATERPROOFNESS

The sealing of our electronic devices protects them from moisture and ensures their operation in rainy conditions.

LITHIUM BATTERY

This type of battery offers sufficient voltage for the needs of powerful devices such as alarms, long life and resistance to extreme temperatures.

DEDICATED TRANSPORT BRACKET

For these devices, there is a dedicated transport bracket.

SUITABLE TRANSPORT BRACKET

The suitable transport bracket is supplied with the device.

COLD RESISTANCE

The cold-resistant locks have been tested and work even in freezing conditions.

CERTIFICATIONS & GUARANTEES

SRA

CLASSE
S.R.A.

The SRA technical center or Safety and Automotive Repair has been set up by a group of insurers and applies to vehicles, their spare parts and their main accessories including anti-theft protection (U-lock, disc lock, chains, electric locks, ...)

Its classification is therefore a guarantee of quality as well as high resistance of the safety device to any attempt of theft (picking, sawing, bolt cutter, drilling). So when an anti-theft device is SRA approved, it means that you have equipment that can guarantee you protection recognized by insurers.

The SRA approval of an anti-theft device therefore ensures compliance with safety standards. That's why you'll see approved locks that are almost unbreakable.

The classification is valid for 3 years by agreement signed with the SRA. AUVRAY is recognized capable of manufacturing this type of anti-theft device with the necessary level of security for a minimum period of 3 years. This does not guarantee the duration of maintaining the level of safety of each device.

VELOSRA

As with the "CLASSE SRA" label, historically intended for motorized two-wheelers, the bicycle lock classification procedure involves a series of tests carried out in the CNPP laboratory by certified operators. First, non-destructive tests (lock picking) are performed, followed by destructive tests that simulate real-life theft attempts on a bicycle attached to a fixed point (sawing, drilling, twisting, cutting, and crushing). Obtaining the "VELOSRA" label requires a mandatory annual audit of the lock manufacturer's production site. The required "VELOSRA" label on the lock's packaging allows cyclists to quickly and easily identify it at retail outlet.

ART

The ART organization comes from the Netherlands. Where it's crawling with bikes. Bringing together consumer representatives (ANWB), bicycle manufacturers (RAI) and insurers specializing in two-wheelers, the ART Foundation has developed a quality label. Following tests carried out by an independent body, the approved bicycle lock is classified according to its level of safety. Thus, it is with a star system that the preventive value of the anti-theft is identified. The more stars an anti-theft device has, the higher its preventive value and the more it protects against theft. A five-star anti-theft device has the highest preventive value. However, for bicycles, a 2-star approved bicycle lock is considered sufficiently secure for Dutch insurers.

FNUCI

The single national file of identified cycles (FNUCI) has been implemented since January 2021 under the leadership of the Ministry of Transport. It allows thanks to the registration of bicycles to fight against the networks of theft and concealment. AUVRAY is authorised as an identification operator with the ICA Bike and SPEEDMARKING solutions. These products make it easy to locate and return bicycles.

HOW TO USE

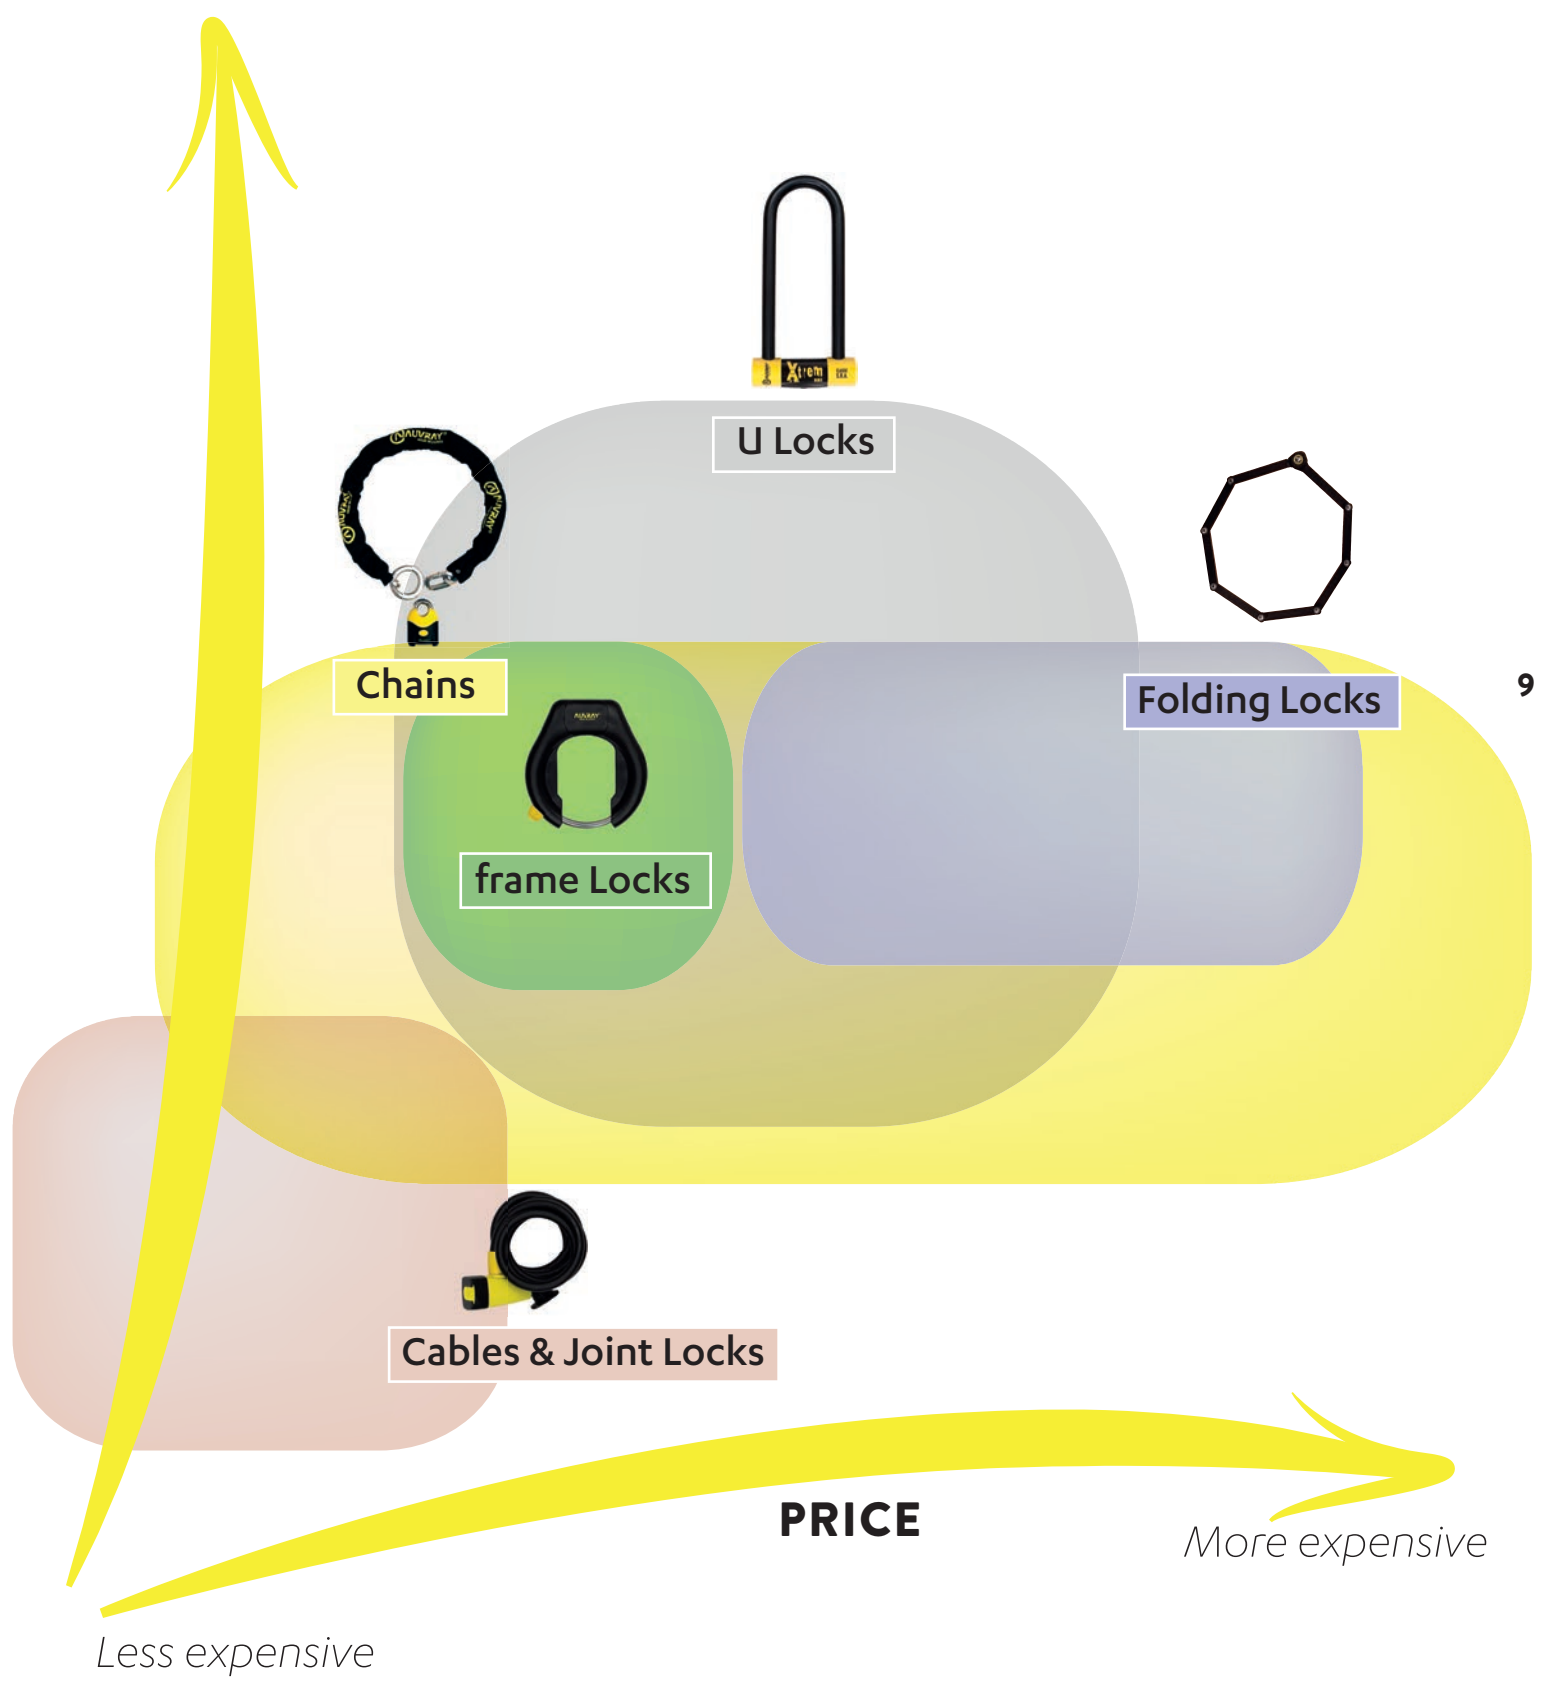

- > For maximum security, attach your 2-wheel to a fixed post using a **AUVRAY** U Lock or a heavy duty chain and anchor, in a well-lighted place at night.
- > When riding, do not carry the lock with you even in a backpack. Use the **AUVRAY** bracket or transport kit best suited to your bicycle, motorcycle or scooter.
- > Regularly oil the cylinder, shackle ends and lock body moving parts using the **AUVRAY** lube spray DN09A.
- > Always keep a spare key at home together with the copy code.

GUARANTY

- > The guaranty covers mechanical and electronic **AUVRAY** locks.
- > **AUVRAY** locks are guaranteed against failure due to material defects or workmanship, except cosmetic damages, neglect, lack of service and misuse, against proof of purchase and return of defective product at customer expenses. The guaranty does not cover the return freight expenses, loss of key, loss or theft or other related costs. Against a Return Merchandise Authorization, only the products proven to be defective by **AUVRAY** technical department will be replaced or repaired, then sent back to the approved **AUVRAY** reseller where the product was bought. Batteries and consumables are not guaranteed.
- > **AUVRAY** locks are guaranteed 2 years, extended to 10 years for S.R.A. certified **AUVRAY** lock-up systems.
- > Applies worldwide

PCB	KG
5	0.054 kg

TRANSPORT BRACKET for anti-theft in U Xtrem bike

for shackle Ø16 mm
Powerful clamping, anti loosening
Safe transport of the U-lock

Benefits

- Adaptable base on frames up to 50mm diameter
- Adjustable clamps
- Ring to be fixed on the shackle by pressure screw
- Removable base-ring connection secured by clipping
